

# EXOSOMES AS COSMETICS INGREDIENTS

Cells communicate by exchanging vesicular and non-vesicular particles, such as exosomes.

Exosomes contain unique bioactive molecules that support cell function, heal and activate revitalizing programs. They are protected by a membranous envelope and marked by a label to be recognized and taken by the cell that needs such support.

**Partner with Exolitus: discover bioactive exosomes from plants, mushrooms, and milk uniquely suited to elevate your skincare formulations**

Heal acne scars

Before After

Reduce allergic inflammation

Before After

- Increase elasticity
- Lower pigmentation
- Improve hydration
- Reduce wrinkles

## Our advantages:

- QC following the guidelines of international standards ([MISEV](#) and [PCPC](#))
- Research-supported bioactivity
- Broad selection range
- Product development support

Over 75% of tested cosmetic products claiming exosomes either lack them entirely or fail to properly identify and quantify their presense.
