PVC Pergolas – Reliable Shelter for Any Weather

We offer durable PVC pergolas and coverings that provide protection against all weather conditions. The tarpaulins, made from high-quality German Mehler Haku material (680 g/m²), are strong, waterproof, and resistant to UV radiation and extreme temperatures (-30 °C to +70 °C). Transparent foils from the Japanese brand Achylles ensure excellent clarity and frost resistance. With premium materials and precise craftsmanship, our pergolas guarantee long-lasting durability and maximum comfort.

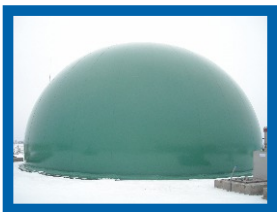

Custom-Made Truck Tarpaulins – Quality, Durability, Reliability

We manufacture truck tarpaulins for all types of vehicles, focusing on high quality and long-lasting durability. We keep a wide selection of sliding systems, ratchets, and all necessary accessories in stock, including shackles, hooks, and cables. Our tarpaulins come with full XL certification and special covers for beverage transport compliant with EN 12641-2. We offer all fastening types, from classic TIR eyelets to the faster bonanza system. With our tarpaulins, you get maximum cargo protection and easy handling.

Large-Format UV Printing on Roll Materials

Fast and durable printing with high color stability. UV technology ensures resistance to abrasion and sunlight. LED UV lamps guarantee consistent color quality. The ability to print with white ink allows printing on colored materials. An ideal solution for truck tarpaulins, banners, and other large-format applications.

Biogas stations

We manufacture covers for biogas plants using special materials and high-frequency welding to ensure maximum seam strength. These plants generate electricity and heat by processing crops and animal residues and, unlike solar and wind power plants, provide stable energy all year round.

Decontamination tubs

Unlike plastic or metal tubs, our tubs can be formed around barriers. They are highly resistant to oil, acid, and other chemicals. The tub is made of PVC with a special surface treatment and is usable as a mobile pool for sanitary, technical, and decontamination purposes. The tub is suitable for short-term storage of technical liquids, oil products, and chemicals.

Halls

Metal halls are primarily designed for long-term use—storages, riding halls, etc. The construction is made of supporting trusses and does not require demanding landscaping. The sheeting of halls is made of technical textile.

**Our work has an exact specialization.
We produce high-quality advertising media and tarpaulin covers.**
